

Ready for LTE with Teko Telecom Repeaters

How can it be that a company draws on over 30 years of market experience and is a start-up company at the same time? This is the case with the Teko Telecom S.p.A. from Castel S. Pietro Terme in Italy. With roots dating back to 1977, the telecommunications specialist made a completely new start last year.

“In fact, we reset the whole business right in the middle of the economic crisis,” says Managing Director Remo Ricci. “Everything is new now: our product portfolio, our customer basis, our mission and vision and even our location.”

The company’s product program includes optical systems, off-air repeaters and cabinets. Equipment designed and produced by Teko Telecom is suitable for all mobile standards and bands and meets even extraordinary coverage and capacity requirements. Regardless of the protocol or modulation it covers different output power and network topologies. “Our products are state-of-the-art and enable reception even in critical environments, such as in underground stations, tunnels and crowded buildings. We draw on our own research and development team that continuously works on the

improvement of our existing solutions and on new future-oriented systems.” Since its re-start, Teko Telecom has been able to establish a network of top class business partners. It is almost needless to say that the company holds all required certificates and operators’ licences.

“Our products are state-of-the-art and enable reception even in critical environments.”

Teko was founded in 1977 in Bologna and soon became the Italian market leader in broadcasting solutions. The company continuously grew and in 2001, Teko had the

Teko draws on a well-developed repeater network for rail infrastructures

biggest repeater network for rail infrastructures Europe-wide. When MetaSystem Group took over, the whole business model was reviewed and re-organised.

Top quality, customer satisfaction, user friendliness

“The new business philosophy is based on best-in-class products, customer satisfaction and user-friendly solutions,” explains the Managing Director. “We deliver what we promise is our slogan and our guiding principle for all customer-oriented activities. From mid 2009, our systems have been supplied to foreign Customers as well and, among them, the main are from Indonesia and South Africa. Recently we have been awarded from a Leading European Mobile Operator for their headquarters LTE2600 coverage; the optical system will be on air starting from December 2010. It’s also worthwhile to mention that in Italy our equipment has been used for the

high-speed trains UMTS coverage. Another important asset is our spirit, our corporate culture. All our employees identify with our business and we actively support teamwork. We regularly discuss new concepts. Our parent company MetaSystem leaves us freedom to develop and gives us greatest support possible. I am positive that we will be able enhance our market position within the next years.”

Teko's repeaters ensure a smooth traffic flow
